

# Package ‘oaqc’

October 14, 2022

**Title** Computation of the Orbit-Aware Quad Census

**Version** 1.0

**Description** Implements the efficient algorithm by Ortmann and Brandes (2017) [doi:10.1007/s41109-017-0027-2](https://doi.org/10.1007/s41109-017-0027-2) to compute the orbit-aware frequency distribution of induced and non-induced quads, i.e. subgraphs of size four. Given an edge matrix, data frame, or a graph object (e.g., ‘igraph’), the orbit-aware counts are computed respective each of the edges and nodes.

**Depends** R (>= 3.4)

**Suggests** igraph, knitr, rmarkdown

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**NeedsCompilation** yes

**SystemRequirements** C++11

**RoxygenNote** 6.0.1

**VignetteBuilder** knitr

**Author** Mark Ortmann [aut, cre],  
Felix Schoenenberger [aut]

**Maintainer** Mark Ortmann <[mark.ortmann@uni.kn](mailto:mark.ortmann@uni.kn)>

**Repository** CRAN

**Date/Publication** 2017-11-14 15:17:21 UTC

`annotate_result`      *Annotates the igraph object with orbit labels.*

### Description

Annotates the igraph object with orbit labels.

### Usage

```
annotate_result(graph, orbits, non_ind_freq)
```

### Arguments

- |                           |  |
|---------------------------|--|
| <code>graph</code>        | Unmodified input graph.  |
| <code>orbits</code>       | List with <code>n_orbits</code> , <code>e_orbits</code> matrices.            |
| <code>non_ind_freq</code> | A flag indicating whether non-induced frequencies have to be written or not. |

### Value

`orbits` if the input is not an igraph, the annotated igraph instead.

`as.edge_list`      *Coerce graph input.*

### Description

Coerce graph input.

### Usage

```
as.edge_list(graph)
```

### Arguments

- |                    |                                       |
|--------------------|---------------------------------------|
| <code>graph</code> | A matrix, data.frame or graph object. |
|--------------------|---------------------------------------|

### Value

Edge list matrix.

---

**oaqc***Orbit-aware Quad Census computation*

---

## Description

Calculates the orbit-aware quad census on an edge and node level, see `vignette('oaqc')`.

## Usage

```
oaqc(graph, non_ind_freq = F, file = "")
```

## Arguments

- |                           |   |
|---------------------------|---|
| <code>graph</code>        | A matrix, data.frame or graph object.   |
| <code>non_ind_freq</code> | A flag indicating whether non-induced frequencies have to be returned or not. |
| <code>file</code>         | Name (and location) of the file to be written.                                |

## Value

orbit-aware quad census on a node and edge level. Consult `vignette('oaqc')` to see the correspondence between orbit and quad.

## Examples

```
k4 <- data.frame(  
  source = c(0, 0, 0, 1, 1, 2),  
  target = c(1, 2, 3, 2, 3, 3)  
)  
  
k4orbits <- oaqc(k4, non_ind_freq = TRUE)  
print(k4orbits)
```
